

4 CH 960P Resolution AHD&CVI&TVI Video Fiber Transmission

1. Product Overview

My company produces coaxial digital high-definition optical transceiver (hereinafter referred to as the coaxial HD optical transmitter and receiver) is analog HD video HD-AHD, HD-CVI, signal HD-TVI turn optical fiber transmission of high speed optical fiber transmission products. Coaxial HD optical transceiver integrates advanced high-speed optical fiber communication technology and digital video technology and data communication technology, and the high reliability of the large scale application specific integrated circuit and the surface mount technology, applied to one of the remote high-resolution real-time video monitoring transmission advanced products.

2, Appearance

3 Product characteristics

- ☑ Advanced lightning protection design, support 5.7KV lightning protection;
- ☑ Industrial design, SMT technology;
- ☑ Digital optical fiber transmission platform, multi service platform with flexible configuration;
- Provide desktop plug-in frame, concentrated in 2 ways;
- ☑ Independent intellectual property rights of large scale integrated circuit core;

131 Srinakarin Park Village 1, Nongbon Pravate, Bangkok 10250 TEL : (+66)2-7163564-5 , FAX : (+66)2-716-3566

- ☑ Single fiber transmission, Optional 20KM, 40KM, 60KM, 80KM, 100KM, 120KM long distance transmission.
- ✓ Support 0.3 million standard video and 1280X720P/30Hz and1280PX960P/30Hz and 1280X
 720P/50Hz resolution pixel camera, analog coaxial HD video, studio grade transmission quality.

Uncompressed video transmission real-time transmission, to guarantee the best effect;

4, product structure (unit: mm)

5、 technical parameter

| | Video input and output impedance | $75\Omega(\text{non-equilibrium})$ | |
|------------------|----------------------------------|------------------------------------|--|
| Video parameters | Standard video input / output | 1.0Vp_p Type | |
| | voltage | | |

131 Srinakarin Park Village 1, Nongbon Pravate, Bangkok 10250 TEL : (+66)2-7163564-5 , FAX : (+66)2-716-3566

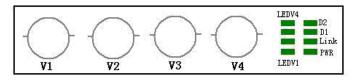

www.pg-link.com

| | Support camera pixels | 0.3 million 、1 million、 | |
|--------------------|---------------------------------|-------------------------|--|
| | | 1.3 million、 | |
| | | Standard clear video | |
| | Video pixel | 1280 (H) *720 (V) /30Hz | |
| | | 1280 (H) *720 (V) /50Hz | |
| | | 1280 (H) *960 (V) /30Hz | |
| | | | |
| | Differential gain (10%-90% APL) | <±1% Type | |
| | Differential phase | <±1% Type | |
| | (10%-90% APL) | | |
| | Signal to noise ratio | >60dB (8Bit) | |
| | Channel physical interface | BNC | |
| | wavelength | 1310nm&1470nm-1610nm | |
| | | 50/125umultimode | |
| | Fiber type | 62.5/125umultimode | |
| optical parameters | | 9/125usingle mode | |
| | optical output power | -3~-9dBm | |
| | Receiver sensitivity | -26dBm | |
| | Optical Connectors | FC, ST, SC | |
| | Working power supply | 110V~240V AC adaptive | |
| C I | Operation Humidity | 0~95% | |
| General parameters | working temperature | -0°C~60°C | |
| | storage temperature | -40 °C ~85 °C | |

6 Interface and LED indicator light function

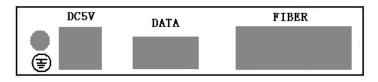

Transmitter and receiver front panel has 1 BNC interface and 8 green indicator light, As shown in the following figure.

Front panel interface: V1-4 for BCN video interface, the transmitter on the BNC video interface for video input interface, video connector, the corresponding indicator lights on. The BNC video interface on the receiver is a video output interface, which is used for connecting a video recorder.

Transmitter and receiver panel has a grounding screw and a DC power seat interface and a data interface and a burring, as shown below.

After panel interface for connecting screws for connection, in order to achieve better lightning anti-static effect; power supply interface is used for connecting external power adapter, data transmitter, and data ports for connecting a video recorder or keyboard; fiber optical interface for connecting optical fiber.

| Indicator light | description | | |
|--------------------|--------------------------|--|--|
| | V1-4 Video interface | | |
| LEDV1-4 | indicator | | |
| PWR | Power indicator light | | |
| LINK | Optical fiber connection | | |
| | indicator | | |
| D1 | Data indicating lamp | | |
| D2 | reservation | | |

The front panel of the 8 indicators corresponding function as shown below:

At the transmitter, the PWR power indicator light, the indicating lamp into the work status indication, ledv1-ledv4 corresponding V1-V4 four way video, BNC socket at the insertion of active video and corresponding indicator of stability constant light. Otherwise, it is dark. In the absence of normal connection under dark or flicker with reverse data of optical transceiver, optical fiber is inserted, under normal and receiver connectivity, link connection indicator light. After the normal connection of the optical fiber, such as receiving the data signal transmitted to the receiver, the D1 will blink, D2 lights for the reservation. The transmitter pure video fibertransmissionsystem on LINK, D1, D2 lights to keep the lights, no indication.

At the transmitter, the PWR power indicator light, the indicating lamp into the work status indication, ledv1-ledv4 corresponding V1-V4 four way video, BNC socket at the insertion of active video and corresponding indicator of stability constant light. Otherwise, it is dark. In the absence of normal connection under dark or flicker with reverse data of optical transceiver, optical fiber is inserted, under normal and receiver connectivity, link connection indicator light. After the normal connection of the optical fiber, such as receiving the data signal transmitted to the receiver, the D1 will blink, D2 lights for the reservation. The transmitter pure video fibertransmissionsystem on LINK, D1, D2 lights to keep the lights, no indication.

7. Ordering information

| product | describe | Company | Product model |
